MiQ

The partnership

Together, Musicoin and MiQ will focus on creating a new decentralized and universal platform, making Musicoin's digital currency globally accessible and frictionless for every member of the music community, to overcome what has been the biggest barrier to blockchain projects so far.

Musicoin and MiQ share a vision that music creators and listeners alike play a complementary role with each other. Being rewarded and maintaining ownership rights for all their contributions to the community is fundamental for the future success of music.

"We are really excited to partner with MiQ, the first official global partner to utilize \$MUSIC blockchain to develop modern, advanced, music-applications powered by the Musicoin technology. The track record of MiQ creating award-winning applications will help tackle the fundamental UX issue with design thinking." Said Isaac Mao, Creator of the Musicoin Project.

"Musicoin and its creator Isaac Mao have truly brought something valuable to the world. Thanks to blockchain and cryptocurrency technology we have arrived at the new Internet age - now any form of content shared on the Internet can be recognized as having a tangible monetary value; while intrinsically connecting everyone in that social network. MiQ's highly dedicated and international team sees joining with Musicoin as a great opportunity to play a contributing role in shaping the next generation of music Apps." Said Johnny Quattro, Founder CEO of MiQ Group.

About Musicoin

Isaac Mao, creator & mastermind of Musicoin Project

Musicoin.org is a project that aims to maximize global revenue for musicians through its blockchain-based peer-to-peer and pay-per-play technology. The project eliminates the need for traditional industry intermediaries and provides a global blockchain, a music catalog and programmable platform that yields a currency called \$MUSIC supporting its community. \$MUSIC is currently listed on two cryptocurrency exchanges and can easily be converted to currencies such as Bitcoin, Ethereum and others.
